Enterprise Mobility Management : Challenges

Currently 2 billion people worldwide use a smartphone. Technology has pushed us to a point where no organization (IT or non-IT) can sustain without the integration of mobile devices in business.

But the incorporation of smartphones and tablets in enterprises is not without its challenges. Accessing corporate network and resources from mobile devices pose huge risks to corporate security. In case of an organization the sensitive data on a mobile device may often be more valuable than the device itself. Thus a solution for managing mobile devices is essential to ensure corporate security.

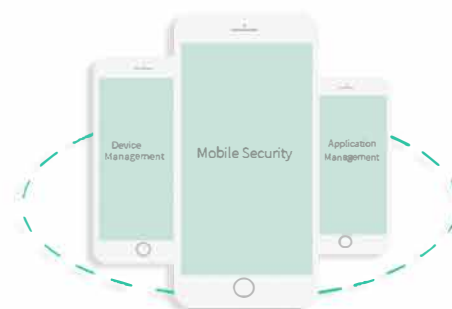

Hexnode Mobile Device Management Solution

Hexnode offers a comprehensive mobile device management (MDM) solution to easily manage and secure the smartphones and tablets in any organizations. With Hexnode MDM, enterprises can safely integrate mobile devices while ensuring corporate security and compliance with business policies.

Benefits of Mobile Device Management (MDM)
