

Data Usage 101: The essentials of managing your data

Imagine you are on a treasure hunt, and the treasure that you are looking for is information.

Your device serves as your hunting map, and the internet serves as the path you take to find the treasure.

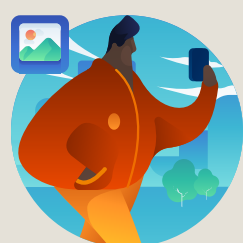

Data usage is like the amount of energy you spend on your treasure hunt. The more information you need, the more data you will have to use.

These activities consume most of your data:

HD video streaming
900 MB per hour

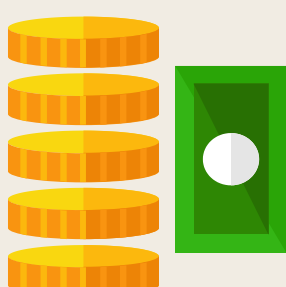

Videocalling
480 MB per hour

Web browsing
60 MB per hour

Apart from these, downloading movies and large files, apps syncing to cloud and updating themselves can also cost you a lot of data.

Just like having to buy metal detectors and pay for a big crew for treasure hunting, you will have to buy data from your internet service providers too.

It is important to effectively manage how much data you are using so that you don't accidentally use up all your resources before finding the treasure.

You are almost there!

Go a bit more deeper to see how Hexnode helps you to manage the data usage of all your enterprise devices.

Hexnode's Data Usage Management solution lets you keep a hawk-eye on your data consumption, giving you the power to manage and regulate it with precision.

Hexnode's Data Usage Management solution

For Android

- Enforce network restrictions to block Wi-Fi data and mobile data.
- Enforce app-wise restrictions to ensure unwanted apps are not consuming your data.
- Notify users and admins, and automate remedial actions when the mobile data or Wi-Fi data reaches a particular limit

For iOS

- Monitor mobile data usage and Wi-Fi data usage.
- Enforce restrictions for cellular data usage and data usage on roaming for each app.
- Notify users and admins, and automate remedial actions when the mobile data or Wi-Fi data reaches a particular limit

Pro-tip

Get real-time network data usage reports for each device and app from Hexnode's Reports section to better analyze your data usage statistics.

The increasing use of mobile applications in corporate offices has led to a surge in telecom expenses for the company.

So, unlock the power of Hexnode and effortlessly manage your data usage by starting your 14-day free trial now!
