Locking Access and Looping Displays

Configuring Website Kiosks & Digital Signage on Windows Devices with Hexnode

Windows Website Kiosk Lockdown

Restrict device access only to a specific website or a set of websites, to ensure a secure and controlled browsing experience.

User interaction enabled when in this mode.

Web URLs are supported when in this mode.

Windows Digital Signage Display

Deploy customized and dynamic signage content across devices, to display navigation information, promotional content and more.

Users are only allowed to view the contents of the screen.

This lockdown mode supports pdfs, images, videos.

hexnode

Limit users access to only necessary websites

Deploy dynamic signage content across devices.

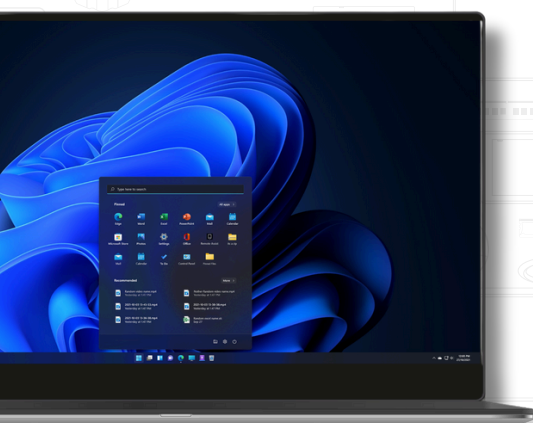

At the user's side

Windows Website Kiosk Lockdown

Device will launch the Kiosk Browser app and enter Website Kiosk mode, when user logs in. Access to other apps or functionalities.

Windows Digital Signage Display

The kiosk account on the device enters digital signage mode. The configured URLs, images, or videos will be displayed dynamically.
